

Leadhead and squid fishing goes to the next level with Sabo Jig Heads from AHI USA

The all new Sabo Jig Head System is the latest creation from AHI Usa. This performance-tuned jig system has been developed with the Southern Californian angler in mind and are perfect for the white seabass competition. In addition to the Sabo Jig Heads, Promar will have a three-person drawing for free squid.

The squid will be housed in the Promar Bait Hotel in the harbor in one of the Promar 20-scoop capacity bait motels. The winners can just cruise by, grab their three scoops courtesy of San Pedro Bait Co. and start fishing. Plus, a Bait Hotel will be given away to one of the three lucky anglers!

As for the jigs, anglers will find that the three Sabo head styles each have a specific application and purpose for fishing white seabass.

The Sabo Squid Head is a squid imitator that offers realistic appearance and action that fish can't resist. Drop the Sabo Squid down and watch it work. Pop the rod tip up for realistic jigging action. Tuned action fins cause the lure to dodge and dart and literally shoot around like a squid.

There's an impact resistant outer shell that features amazing squid-like detail and vibrant colors to suit a variety of baits and conditions. A laser sharp point assures a solid hookset. The Squid Head works great with a

squid or two pinned on it, especially when there is no live squid and you want to make your fresh dead look like the real thing.

Cast it out towards the kelp line, beach or that section of seabass water you've been watching and slowly work it back to the boat. The white seabass simply can't resist! You can also fish the Sabo Squid head with hoochies, skirts and plastic squids.

Sabo Jig Heads are twice the size of a standard jig head without twice the weight! A larger head-per-weight ratio offers anglers a more uniform and natural look. Select the size that best fits your lure. Vibrant colors and realistic features make the Sabo Jig Head a great option for fishing a variety of conditions.

THREE TEAMS WILL BE DRAWN at the Captains' Meeting that will win a scoop of bait. To claim the bait, the teams will need to visit the *WON* boat on a nearby mooring and the bait from the Promar Bait Motel will be handed off. The Promar Bait Motels will be handed out as raffle prizes at the awards ceremony.

THE SABO JIG HEAD matches the hatch when it comes to fishing squid — either live or dead — on a leadhead, making it much more effective than a standard leadhead when it comes to fishing the leadhead and squid.

BEN BABBITT OF WON caught this biscuit on a Graftech stick last year. Several teams will win these rods at the event in free drawings at both the Captains' Meeting and the awards ceremony.

WON proudly announces Graftech Rods again on board as exclusive WSB Jackpot rod sponsor

The best value for quality rods. Period.

Graftech offers up the perfect lineup for WSB anglers — the first being the Wallbanger 7'2L and 7'2M. The 7'2 is perfect for making tight casts when you're in close to the kelp. The tip is soft yet provides backbone if you lay into a good.

The Wallbanger 7'8L and 7'8M are absolutely perfect for fishing "kelp cutter" rigs of Spectra tied to a short topshot of fluorocarbon. Spectra has less stretch than mono so it is a must that your rod has a softer tip to absorb some of the shock from the early head shakes and also when you get the wsb alongside the boat. The Wallbanger 7'8L and 7'8M match up well with an Avet SX for your "kelp cutter."

The GIS 8'0L, 8'0M and 8'0H are great for making long casts when the boat swings wide away from the kelp line or cove. The GIS 8'0L should be fished with 15- to 20-pound, the 8'0M with 20- to 25-pound and the 25- to 30-pound should be fished with 25-30-pound.

The Graftech lineup of 8-foot and 9-foot jig rods (GJS 80 M & H, GJS 90M) are the best casting rods available.

You can check out many of these fine Graftech models at the Avet/Costa/Graftech casting contest at this year's WSB tournament.

Yamaha's legendary F250 a great repower solution for boaters

Yamaha announced it is bringing back the legendary 3.3-liter F250 "Mechanical Shift" as a solution for boaters who wish to repower without upgrading to a later electronic control box.

"There are a lot of boaters out there who are satisfied with their boat and simply want new outboards. The F250 'Mechanical Shift' is for those who wish to replace rather than upgrade," said Phil Dyskow, Yamaha Marine Group president.

The F250 is compatible only with cable-type control boxes. At the same time, it has the ability to use Command Link electronic gauges. With the use of a gateway, it can also operate with NMEA-2000 compatible displays.

The heart of the Yamaha F250 is a compact 60-degree, 3.3 liter (204 c.i.) block. It's equipped with Variable Camshaft Timing, which dramatically increases low and mid-range torque. With proven Yamaha multi-point electronic fuel injection, it delivers easy, instant starts, fast acceleration, and maximum top-end speed.

Its single throttle valve feeds

individual long intake tracks, which improves hole-shot, acceleration and mid-range performance. Several features, such as Yamaha's closed fuel vapor system, have helped this outboard earn a three-star rating for ultra-low emissions from California Air Resources Board (C.A.R.B.) The outboard also meets or exceeds all Federal emissions requirements.
